Energie rinnovabili al 20% entro il 2020. E l'Italia ?

di Spataro

Chiediamoci cosa stiamo facendo. Il Ponte o le rinnovabili ?

del 2009-11-26 su Civile.it, oggi e' il 25.04.2024

From Eutube:

"Raising the share of renewable energy from 8.5% to 20% in the overall energy consumption is a necessary contribution to the global fight against climate change and towards better control over our energy dependence.

"The various uses of renewable energy are examined: electricity through wind and hydraulic energies; electricity or heat through geothermal and solar energies; electricity, heat, and biofuel coming from biomass.

"The EU is a world leader in the use and deployment of technologies that exploit renewable energy sources, providing over 350.000 jobs and an annual turn-over of â¬ 30 billion.
